

INTEREST RATES, AMORTIZATION, GUARANTEE FEE, ANNUAL CHARGE,
AND FIXED PERIOD

I. GENERAL. This Instruction contains the interest rates for Rural Business-Cooperative Service (RBS), Rural Housing Service (RHS), Rural Utilities Service (RUS), and the Farm Service Agency (FSA) loans; tables for use in determining the amounts of interest on loans at different rates; factors in amortizing loans; and the guarantee fees for guaranteed loans.

II. DESCRIPTION OF EXHIBITS. Exhibits contained in this Instruction provide the following information:

A Exhibit A - Interest rates for direct loans. Interest is charged at the given rate on the unpaid principal balance of the loan.

B Exhibit B - Interest rates for certain RBS, RHS, RUS, and FSA. This table reflects the interest rate charged to the borrower.

C Exhibit C - Factors for computing interest charges in connection with loans on \$1 for various rates of interest between given dates and January 1.

D Exhibit E - Periodic payments required to amortize \$1 and interest at the rate of interest determined for each fiscal year in connection with Watershed, Rural Renewal, and Resource Conservation and Development loans.

E Exhibit F - Periodic payments required to amortize \$1 and interest at various rates of interest and periods of time.

F Exhibit G - Tables for determining the number of days between any two given dates.

G Exhibit H - Periodic payments required to amortize \$1 and interest at various rates based on payments being made monthly.

H Exhibit I - Interest computation tables for Operating loans.

I Exhibit J - Definition of prime or unique farmland.

J Exhibit K - Fees for guaranteed loans.

K Exhibit L - Effective Dates and Interest Rates for 90-Day Treasury Bill.

Farmer Program Nonprogram - Real Property	97
Farmer Program Nonprogram - Chattel Property	96

FOOTNOTES

- 1/ This interest rate applies when the State Director, as authorized in RD Instruction 1944-D, makes an exception to the credit elsewhere provisions.
- 2/ The guaranteed subsidy rate will be the difference between the interest rate in effect for Direct Farm Ownership or Operating loans, whichever is appropriate, and the rate on the original note when:
- a. The guarantee fee is due under the terms of Form RD 449-17, "Contract of Guarantee," or
 - b. The Form RD 449-34, "Loan Note Guarantee," is substituted for a Form RD 449-17.

FOOTNOTES (CON.)

- 3/ For Essential Community Facility loans, Direct Farm Ownership loans for recreation or nonfarm enterprises, Direct Farm Operating loans for recreation enterprises, Soil and Water loans for recreation purposes, and individual Recreation loans, the interest rate will be increased by 2 per centum per annum if the project being financed will involve the use of, or construction on prime or unique farmland. Prime or unique farmland is as defined in Section 657.5 (a) and (b) of Title 7, Code of Federal Regulations (1980). (The definition is included as Exhibit J to this Instruction.)

The 2 per centum interest rate increase will not apply if the applicant/borrower is a public body or Indian tribe and has demonstrated to the appropriate Agency that there are no suitable options for locating the proposed essential Community Facility project on land that is not prime or unique farmland.

For each essential Community Facility loan, the Rural Development Manager, after consultation with the Natural Resources Conservation Service (NRCS), will determine whether the proposed project will involve the use of, or construction on, prime or unique farmland.

For each Direct Farm Ownership loan for a recreation or nonfarm enterprise, Direct Farm Operating loan for a recreation enterprise, Soil and Water loan for a recreation purpose, or individual Recreation loan, the Community Development Manager, after consultation with NRCS, will determine whether the proposed project will involve the use of, or construction on, prime or unique farmland. The determination will be documented by the appropriate Agency and made a part of the official file.

- 4/ Eligibility for poverty line, intermediate, and market interest rates is described in RD Instruction 1942-A, § 1942.17(f).
- 5/ Current Percentage-Cash Preference is the percentage difference for which a cash offer will be given preference over an offer requiring credit. The Current Percentage-Cash Preference listed apply to maximum terms and conditions authorized by Rural Development Instructions. Application of these percentages is outlined in RD Instruction 1955-C.
- 6/ If any points are being paid on a cash sale, the cash price must be reduced by the point value prior to the comparison.

FOOTNOTES (CON.)

- 7/ The 90-Day Treasury Bill Rate is used in computing present values and net recovery values as required by Farm Service Agency (FSA) transferred Instruction 1951-S. This rate must be entered in the Debt and Loan Restructuring System (DALR\$) software. Application of this rate is discussed in §1951.909(f)(1)(ii) and (g) of FSA transferred Instruction 1951-S.
- 8/ The MRIAA is the maximum percentage rate of assistance which the FSA may grant at any given time. This rate will be established periodically by the Administrator within statutory limits. Application of this rate is discussed in Exhibit D of FSA transferred Instruction 1980-B.
- 9/ The rate charged may not exceed the current Federal National Mortgage Association posted yield for 90-day delivery (Actual/Actual) plus six-tenths of 1 percent for 30-year fixed rate conventional loans.
- 10/ This is the interest rate charged on judgment accounts, as determined by the Secretary of the Treasury, pursuant to 28 U.S.C., Section 1961.

TABLES TO DETERMINE THE NUMBER OF DAYS BETWEEN ANY TWO GIVEN DATES

To find the number of days between any two given dates, proceed as follows:

1. Find the number for the earlier of the two dates by locating the day of the month in the left hand column of the Table entitled "FIRST YEAR," and proceed across until the desired month is reached.
2. Find the number for the later date by using either the "FIRST YEAR" or the "SECOND YEAR" table. The "SECOND YEAR" Table is used if the later date falls in the succeeding year.
3. Subtract the earlier date "number" from the latter date "number" to determine the number of days between the two dates.

FIRST YEAR

DAY
OF

MONTH	JAN	FEB	MAR	APR	MAY	JUNE	JULY	AUG	SEPT	OCT	NOV	DEC

35	420	.00282
36	432	.00276
37	444	.00270

NUMBER OF YEARS	NUMBER OF MONTHS	AMOUNT
38	456	.00264
39	468	.00258
40	480	.00253
41	492	.00248
42	504	.00243
43	516	.00239
44	528	.00234
45	540	.00230
46	552	.00226
47	564	.00222
48	576	.00219
49	588	.00215
50	600	.00212

Example: \$10,000 advance for 33 years

To determine the monthly installments, multiply \$10,000 by the 33 year factor of .00296. $\$10,000.00 \times .00296 = \29.60

To determine the total amount of interest and principal a borrower will pay over the life of this loan, multiply the number of months times the monthly installment. $\$29.60 \times 396 = \$11,721.60$

Exhibit H-7.25
Page 2
(Renumbered 8-23-73, SPECIAL PN)

PERIODIC PAYMENT REQUIRED TO AMORTIZE \$1.00 AND INTEREST
AT 7% BASED ON PAYMENTS BEING MADE MONTHLY

NUMBER OF YEARS	NUMBER OF MONTHS	AMOUNT
34	408	.00661
35	420	.00656
36	432	.00653
37	444	.00649
38	456	.00646
39	468	.00643
40	480	.00640

Example: \$10,000 advance for 33 years

To determine the monthly installments, multiply \$10,000.00 by the 33 year factor of .00665. $\$10,000.00 \times .00665 = \66.50

To determine the total amount of interest and principal a borrower will pay over the life of this loan, multiply the number of months times the monthly installment. $\$66.50 \times 396 = \$26,334.00$

o o o

PERIODIC PAYMENT REQUIRED TO AMORTIZE \$1.00 AND INTEREST
AT 7.75% BASED ON PAYMENTS BEING MADE MONTHLY

(7-17-74) SPECIAL PN

Example: \$10,000 advance for 33 years.

To determine the monthly instalments, multiply \$10,000 by the 33-year factor of .00828. $\$10,000 \times .00828 = \82.80 . Round this amount to the nearest dollar.

To determine the total amount of interest and principal a borrower will pay over the life of this loan, multiply the number of months times the monthly installment. $\$83.00 \times 396 = \$32,868.00$.

DEFINITION OF PRIME OR UNIQUE FARMLAND

Where the terms "prime farmland" or "unique farmland" appear in this Instruction, including Exhibits and footnotes, the following definitions apply:

(a) Prime farmlands:

(1) General. Prime farmland is land that has the best combination of physical and chemical characteristics for producing food, feed, forage, fiber, and oilseed crops, and is also available for these uses (the land could be cropland, pastureland, rangeland, forest land, or other land, but not urban built-up land or water). It has the soil quality, growing season, and moisture supply needed to economically produce sustained high yields of crops when treated and managed, including water management, according to acceptable farming methods. In general, prime farmlands have an adequate and dependable water supply from precipitation or irrigation, a favorable temperature and growing season, acceptable acidity or alkalinity, acceptable salt and sodium content, and a few or no rocks. They are permeable to water and air. Prime farmlands are not excessively erodible or saturated with water for a long period of time, and they either do not flood frequently or are protected from flooding. Examples of soils that qualify as prime farmland are Palouse silt loam, 0 to 7 percent slopes; Brookston silty clay loam, drained; and Tama silty clay loam, 0 to 5 percent slopes.

(2) Specific criteria. Prime farmlands meet all the following criteria: Terms used in this section are defined in USDA publications: "Soil Taxonomy, Agriculture Handbook 436"; "Soil Survey Manual, Agriculture Handbook 18"; "Rainfall-erosion Losses from Cropland, Agriculture Handbook 282"; "Wind Erosion Forces in the United States and Their Use in Predicting Soil Loss, Agriculture Handbook 346"; and "Saline and Alkali Soils, Agriculture Handbook 60."

(i) The soils have:

(A) Aquic, udic, ustic, or xeric moisture regimes and sufficient available water capacity within a depth of 40 inches (1 meter), or in the root zone (root zone is the part of the soil that is penetrated or can be penetrated by plant roots) if the root zone is less than 40 inches deep, to produce the commonly grown cultivated crops (cultivated crops include, but are not limited to, grain, forage, fiber, oilseed, sugar beets, sugarcane, vegetables, tobacco, orchard, vineyard, and bush fruit crops) adapted to the region in 7 or more years out of 10;
or

(B) Xeric or ustic moisture regimes in which the available water capacity is limited, but the area has a developed irrigation water supply that is dependable (a dependable water supply is one in which enough water is available for irrigation in 8 out of 10 years for the crops commonly grown) and of adequate quality; or

(C) Aridic or torric moisture regimes and the area has a developed irrigation water supply that is dependable and of adequate quality; and

(ii) The soils have a temperature regime that is frigid, mesic, thermic, or hyper thermic (pergelic and cryic regimes are excluded). These are soils that, at a depth of 20 inches (50 cm), have a mean annual temperature higher than 32° F (0° C). In addition, the mean summer temperature at this depth in soils with an O horizon is higher than 47° F (8° C); in soils that have no O horizon, the mean summer temperature is higher than 59° F (15° C); and

(iii) The soils have a pH between 4.5 and 8.4 in all horizons within a depth of 40 inches (1 meter) or in the root zone if the root zone is less than 40 inches deep; and,

(iv) The soils either have no water table or have a water table that is maintained at a sufficient depth during the cropping season to allow cultivated crops common to the area to be grown; and,

(v) The soils can be managed so that, in all horizons within a depth of 40 inches (1 meter) or in the root zone if the root zone is less than 40 inches deep, during part of each year the conductivity of the saturation extract is less than 4 mmhos/cm and the exchangeable sodium percentage (ESP) is less than 15; and,

(vi) The soils are not flooded frequently during the growing season (less often than once in 2 years); and,

(vii) The product of K (erodibility factor) x percent slope is less than 2.0, and the product of I (soils erodibility) x C (climatic factor) does not exceed 60; and,

(viii) The soils have a permeability rate of at least 0.06 inch (0.15 cm) per hour in the upper 20 inches (50 cm) and the mean annual soil temperature at a depth of 20 inches (50 cm) is less

than 59ø F (15ø C); the permeability rate is not a limiting factor if the mean annual soil temperature is 59ø F (15ø C) or higher; and,

(ix) Less than 10 percent of the surface layer (upper 6 inches in these soils consist of rock fragments coarser than 3 inches (7.6 cm)).

(b) Unique farmland.

(1) General. Unique farmland is land other than prime farmland that is used for the production of specific high value food and fiber crops. It has the special combination of soil quality, location, growing season, and moisture supply needed to economically produce sustained high quality and/or high yields of a specific crop when treated and managed according to acceptable farming methods. Examples of such crops are citrus, tree nuts, olives, cranberries, fruit, and vegetables.

(2) Specific Characteristics of unique farmland. (i) Is used for a specific high-value food or fiber crop; (ii) Has a moisture supply that is adequate for the specific crop; the supply is from stored moisture, precipitation, or a developed irrigation system; (iii) Combines favorable factors of soil quality, growing season, temperature, humidity, air drainage, elevation, aspect, or other conditions, such a nearness to market, that favors the growth of a specific food or fiber crop.
